Continuation of 5. does NOT place the application in condition for allowance because: The argument is not persuasive, applicant argument directed to the specification rather than the claims' language, e.g., applicant argued that the prior art fails to teach "the response at the proxy from the device is an invalid IP address". Invalid IP address and invalid protocol address is clearly not the same. Applicant argued, the claimed invention distinguished over the prior arts "Ford cannot test application's conventionally invalid IP address with any existing IP address of the network", the conventionally testing of invalid IP address is not required in the claimed invention. The latter argument indicates an essence of the invention, which may distinguish the claimed invention over prior art. Applicant should include such language in the claims, and provides a passage in the specification, which supports the language.
